spinal cord injury service**

??????

Procedure: **Skin and subcutaneous tissue
echography**

Scheduled: 14/10/2022
Executed: 14/10/2022

Diagnostic question: Urgent – evaluation of lymph nodes

Method: (US imaging:6)

Ultrasound evaluation conducted at the left axillary cavity showed in correspondence to the clinical observation site a detectable abscessed tumefaction presenting grossly oval morphology with dense corpuscular content and a fluid kernel, anechogenic, having dimensions of approx. 25 x 10mm. No evidence of single or bundled tumefactions of significant pathological nature is present at the level of the locoregional lymph nodes chains

Radiology expert: Laura Cacciamali, MD
